AMROTEC® MIB-11V (Series) OPERATOR'S QUICK HANDBOOK (2022 Version)

➤ How to switch to Multi-currency Count operation (if multi-currencies software is purchased)

Touch  country flag on screen to select multi-currencies option. **MIX (will process mixture); AUTO (will separate them).**

- Mixture currencies will be counted in Single-Pass.
- View: Press  CHANGE key to view count results for all currencies or press PRINT Key to print results.

➤ How to Auto-Print Receipt to a printer?

User can set up Automatic printing of count result receipt by choosing Auto Printing ON. Machine will start printing as soon as banknotes are removed from Stacker. ➔ 

MENU ➔ Count Interface ➔ Report Result ➔ Auto-Print ON

➤ How to view & Print 'The Day Total', & 'Grand Total'

Press MENU button ➔ My Grand Total ➔ Print

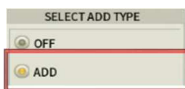

➤ How to Batch/ Strap by Qty or by specific Amount (\$)

Users of MIB-11V Series can select counting / Strapping of banknotes by preset batch number (5,10,20,25,50,100, 200) or by a specific dollar amount. Touch  BATCH to access Batch menu, ➔ Select your choice whether a Batch (qty) [Batch Count Set -] by pressing preset batch numbers or touch "Total Amount -\$" to select a \$ amount to quick strap. Always press [START/STOP] to save your settings.

➤ How to activate ADD function?

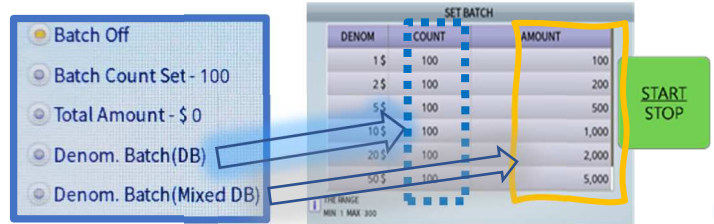

ADD function is to provide a cumulative count of continuous operation (multiple stacks) of banknotes. Touch and select ADD to activate and after processing of stacks, save the current count to Day / Grand total by touching the  ACCEPT key on the Display panel ➔ press OK when prompted.

➤ If ADD function is **not ON**, then, machine will not accumulate multiple counts, but will automatically add each count results to DAY & G. Total.

➤ How to set and activate Denomination Batch (DB) for each denomination.

- To process each denomination of banknotes by a fixed batch number / Qty (apply to SINGLE, FACE, SORT mode only).
- Setting: Touch BATCH key ➔ select ➔ Denom Batch(DB). By default, all denominations are set to 100. To change, touch any of the denomination and Count column and make your changes and press START/STOP button to save the settings.

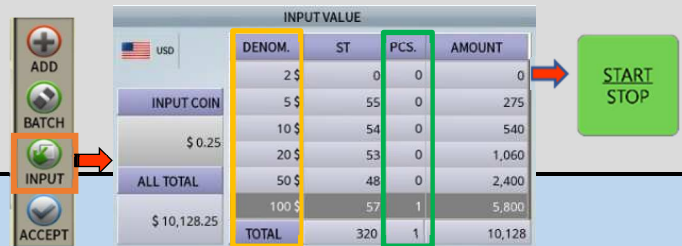

➤ How to process/strap each or all denomination banknotes by pre-set \$ amount for each of them?

- Setting: Touch BATCH key; Select ➔ Denom. Batch(Mixed DB).
- Use the same denomination table to set specific \$ AMOUNT in the AMOUNT column. Press [START] button to save setting.

➤ How to perform Manual INPUT for non-recognized genuine bills in reject pocket.

Prior removing bills from Stacker pocket, by touching [INPUT] icon on Touch Screen, user can see INPUT VALUE screen and can add uncounted banknotes to total count result. Once Manual INPUT is done, Press START / STOP accept results to Total instantly.

➤ Important Counting Modes and explanation:

MIX (As Default Mode)

When Mix mode is selected, Machine will count and denominate mixture denomination of banknotes.

SINGLE

Machine counts and delivers first detected genuine banknotes as standard to Stacker and delivers rest to Rejt Pocket.

SORT (for Organized Strap)

Machine processes organized denominations in a strap of banknotes (Strap banknotes from POS cash drawers).

FACE (Face Up/Down), ORIENT (Face+ Direction)

Machine delivers first detected Face (UP/DOWN) and direction of banknote to Stacker and deliver reverse to Reject Pocket. Using [ORIENT] mode, user can also perform Face and Direction at the same time. ORIENT function is more effective when all bills are on same face.
