[CONSULT WITH YOUR SERVICE PROVIDER]

➤ How to activate ADD and CF (Counterfeit detection)

● **ADD** function provides cumulative count of continuous operation (multiple stack or banknotes) and it is turned off by default. To turn it ON, press  [ADD] key or  Icon on the touch screen. Green LED assures activation and Gray LED → Deactivated.

● **CF** (Counterfeit detection) detects suspect banknotes using various counterfeit detectors. It is turned ON (Green LED) by default. It is not recommended to turn it OFF. By pressing it (Gray LED), will turn off.

➤ How to deactivate not-needed counting Modes

● Users can deactivate counting modes not needed for their operation and for simplicity. Press Mode Icon on the touch screen and use slider to disable the modes users do not need. Enter →

or **[START/ENTER]** key on control panel to save settings.

➤ How to Batch by Qty or by Amount (\$)

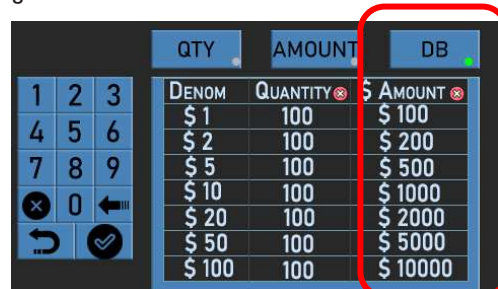

● MX-2S allows users to Batch / Strap by a **specific Qty** or by **specific Amount (\$)**. Press **[BATCH]** key or  Icon on the touch screen to prompt batch setting screen by QTY, AMOUNT.

How to set up "Denomination Batch / DB"?

● MX-2S allows users to Batch / Strap by setting individual Qty or **specific Amount (\$)** for each and every **denominations** and MX-2S will stop at the Strap limit set.

Apply to SINGLE and SORT mode. Press **[BATCH]** key or  Icon to prompt batch setting screen. Press DB and set up your strap limit by typing dollar amount of qty for each denom. Save by pressing  icon.

➤ How to perform Manual Entry for non-recognized genuine bills

● When a circulated genuine bill stopped at the stacker (**top bill**) for **[IMAGE ERROR]** as no-read by image sensors, remove the banknote for manual inspection and if genuine, press **[DETAIL]** key to prompt the Manual Entry Screen where user can enter the denomination of banknote that stopped → press  Icon or **[START]** key, and it will add to the running total and MX-2S will resume operation from where it stopped.

● User can see the machine count and Manual Entry count breakdown if print receipt (given a manual entry was performed).

➤ Important Counting Modes and explanation:

MIX

MIX (As Default Mode)

When at MIX mode, MX-2S will count and denominate mixture denomination of banknotes and show breakdown and print receipt.

SINGLE

SINGLE (Stranger Mode)

MX-2S counts and delivers first detected genuine banknotes as standard to Stacker and stop at other denominations which are not counted to the total. DB strapping function is available in this mode.

SORT

SORT

MX-2S processes organized or mixture denominations strap while stopping at a new denomination change. DB strapping is available.

FACE

ORIENT

FACE (Front / Back), ORIENT (Direction)

MS-2S processes first detected same Face or same portrait direction of banknote for the denomination and stops at non-faced (wrong face) or non-oriented (wrong portrait direction) banknotes of the same denomination in process.
